

【內容】 全文主題清楚切題，第一段描述 iOS 及 Android 作業系統的趨勢變化情形，並比較兩大作業系統的市占率差異。首先指出 Android 總是領先 iOS，但在 2020 年 iOS 趕上其競爭對手，因此此在統計數字上，Android 已不再大幅領先。作者推測此趨勢轉變之可能理由，亦舉實例支持其論述，用藝術形容科技，選材新穎。作者在第二段中表示不在意使用何種作業系統，並陳述自己使用過 Android 和 iOS 的經驗，認為二者皆有其優劣，因此難以斷言何者勝出。最後，作者提醒購機前應思考兩大作業系統之優缺點。綜上所述，全篇文章論述充實且相關細節描寫深刻。

【組織】 段落分明，開頭、發展及結尾的安排順暢，轉承語使用得宜（如：currently、in conclusion），全文連貫得當，皆按提示寫作。

【語言】 句子結構語法大多正確，文句結構饒富變化，能善用修辭技巧，用字遣詞得當（如：in terms of、managed to、lead in the statistics by a large margin、the tables have been turned、figured out、stand out、coming up with the idea、canvas、digitally、as long as、daily essentials、the pros and cons）。本文善用名詞子句（如：Maybe iOS has figured out why so many people prefer Androids、…so it’s difficult to say which system is the clear winner），並能正確地使用關係子句（如：…to try out new things Android has never done before、…the pros and cons each operating system has to offer、…all the daily essentials that I need）。

As you can see in the graph, Android has always been ahead of iOS in terms of market shares. But somehow, in the year 2020, iOS managed to catch up to its competitor. Currently, Android does not lead in the statistics by a large margin anymore. There may be some reasons as to why the tables have been turned. Maybe iOS has figured out why so many people prefer Androids. They start to imitate the features and certain functions of Androids, then they enhance those features to make themselves stand out even more. Or iOS is courageous enough to try out new things Android has never done before. Such as coming up with the idea of the Apple pen, which allows users to treat their iOS devices as if it is a canvas to draw on. It's very unique because it's just art... except it is being done digitally. The above reasons mentioned may be why iOS is catching up.

For me personally, I don't really mind which operating system I use, as long as it contains all the daily essentials that I need. I have no problem with it. I have used both Android and iOS in the past and they have their own advantages and disadvantages so it's difficult to say which system is the clear winner. In conclusion, before you buy a smartphone, think about the pros and cons each operating system has to offer.
